

TEST EXECUTION REPORT

Project Name

API, Database & Automation Testing of Student Management System

1. Project Overview

The functioning of the Student Management System's database operations, automated processes, and APIs were tested. Validating user management, student records, course management, attendance, and outcome management were the main objectives of the testing. The goal was to guarantee that data remained consistent across various activities and that the system operated as anticipated.

2. Test Execution Summary

METRIC	COUNT
Total Test Cases Designed	60
Total Test Cases Executed	60
Passed	60
Failed	0
Blocked	0
Not Executed	0

3. Execution Environment

ITEM	DETAILS
Operating System	Windows 11
Browser	Google Chrome
API Tool	Postman
Database	MySQL

4. Test Execution Remarks

- Every scheduled API request was completed successfully.
- The anticipated outcomes were obtained using database validation queries.
- Automation programs finished without encountering any execution errors.
- The main modules behaved as predicted, according to functional testing.
- The application handled negative test cases and input validation appropriately.

5. Challenges Encountered

- There was no database, API endpoints, or real Student Management System included in the assignment.
- To illustrate the testing methodology and documentation procedure, testing artifacts were created using a sample Student Management System.
